Summary

AI-focused computer science undergraduate who builds and deploys practical LLM and OCR systems. **Imagine Cup 2026 Overall Semifinalist and Launch Track Finalist** for Recall AI, an inventory digitization platform for India's kirana stores. Interested in long-context reasoning, memory systems, and affective computing; experienced in developer education and campus community building.

Education

B.Tech in Computer Science & Engineering (AI Specialization)

2024 – Present

Vishwakarma Institute of Technology

Pune, India

- Relevant coursework: Machine Learning, Deep Learning, Natural Language Processing, Cloud Computing, Database Systems

Projects & Research

Recall AI – Inventory Digitization for Kirana Stores

Imagine Cup 2026

Overall Semifinalist & Launch Track Finalist

- Built a full-stack platform that converts handwritten Hindi, Gujarati, and Marathi ledgers into live digital inventory using **Sarvam Vision AI** and **Azure AI Foundry** (GPT-4o mini).
- Structured raw OCR output into JSON inventory records at **\$0.0004 per scan**; designed offline-first sync with **WatermelonDB** and **Azure Cosmos DB** for low-connectivity environments.
- Developed a self-improving pipeline—training-signal lookup → semantic match → quarantine inbox—that reduced AI cost per scan by **93%** over four months.
- Deployed and tested end-to-end with real Hindi and Gujarati scans at Sai Store, Pune (March 2026).

Cognitive AI Companion

2026 – Present

Ongoing Independent Research

- Prototyping LLM architectures for **persistent memory, iterative reasoning, and context-aware decision-making** using vector stores and reflection loops.
- Analyzing computational models of emotion and affective-computing literature to design more natural, transparent, and trustworthy AI interaction patterns.
- Exploring how long-context systems (like Kimi) can serve as the backbone for cognitively capable companions that retain and reason over extended conversations.

ReelSense – Movie Recommendation System

2026

IEST Shibpur Hackathon – 2nd Runner Up

- Built a full-stack recommender combining SVD-based collaborative filtering + content-based filtering with natural language explanations; balanced relevance with diversity to break popularity bubbles.
- Contributed to a chest X-ray analysis system: hierarchical feature extraction, 14-label CheXpert classification, and structured clinical report generation.

Experience & Community

Perplexity Campus Partner

2025

Perplexity AI

Remote

- Led campus adoption initiatives and created technical content and demos that helped students become active users.
- Earned performance-based incentives for contributions to program growth and engagement.

Technical Skills

Languages: Python, JavaScript, SQL, HTML/CSS

Frameworks: Flask, FastAPI, React, Scikit-learn

AI & Data: LLM APIs, prompt engineering, OCR pipelines, ML, WatermelonDB

Cloud & Tools: Azure AI Foundry, Cosmos DB, Blob Storage, App Service, Git, REST APIs

Awards

Microsoft Imagine Cup 2026: Overall Semifinalist & Launch Track Finalist

IEST Shibpur Hackathon 2026: 2nd Runner Up
